## Dymax O&C Released New Bomar® Oligomers Ideal for UV Coating Formulators

### *Achieve Matte-Finish and Durable Coats on Plastic Substrates*

Torrington, Connecticut – October 18, 2016... Dymax Oligomers & Coatings announced the release of two new oligomers, BDT-1015 and BRS-14320S, that can be utilized by coating formulators to achieve high levels of chemical and abrasion resistance for their UV-curable, matte-finish, and durable top coating on plastic substrates, while overcoming common problems with viscosity and VOC content.

These high functional oligomers offer fast tack-free curing, which speeds up production and ultimately reduces operational costs. Furthermore, these oligomers are tin- and aromatic-free. A technical bulletin, which also includes an assortment of light-curing and dispensing equipment for those looking for a complete system solution, can be downloaded at [www.dymax-oc.com](http://www.dymax-oc.com). Dymax O&C Application Engineers are available to help match oligomers and coatings with the appropriate equipment to simplify the process while optimizing both performance and cost savings.

Dymax Corporation develops innovative oligomer, adhesive, coating, dispensing, and light-curing systems for applications in a wide range of markets. The company's products are perfectly matched to work seamlessly with each other, providing design engineers with tools to dramatically improve manufacturing efficiency and reduce costs. Major markets include aerospace, appliance, automotive, cosmetics, electronics, industrial, medical device, metal finishing, and UV-curable inks & coatings.
